**Re: TITANIUM-UDL™**

In the past, our company has solely used felt paper as a roofing underlayment for both new construction and re-roofing jobs. This past summer, we saw an advertisement for **TITANIUM-UDL™** synthetic roofing underlayment, the features of the product looked great, so we gave the **TITANIUM-UDL™** a try, and we haven't looked back since!

We had used a nail cap gun before the promotion, as we have found the speed of improvement is remarkable. So to receive a Hitachi Nail Gun (as well as a box of nails), plus of course great material to apply it to...we couldn't be happier! Since receiving the Hitachi Plasti-Cap Nail gun, we have switched over 10 general contractors to using **TITANIUM-UDL™** as their sole roofing underlayment, as they are amazed they can save up to 50% in labour costs with no worries about blow-off and the requirement for 'drying-in' after the underlayment is installed!

**TITANIUM-UDL™** has replaced all of our felt paper business, as the coverage is great; one roll covers 10 squares saving a significant amount of time rather than lifting up the equivalent 5 rolls of 30# felt paper. It's also great for walking on, as we found walking on felt paper, the product would be so muddled up by the end of the day, becoming less efficient for it's primary purpose, to protect the roof! With **TITANIUM-UDL™** you could walk all over it for the entire day, and it would still look brand new, giving us reassurance the product will remain in tact in case of any unexpected weather conditions!

I would recommend **TITANIUM-UDL™** and the Hitachi Plasti-Cap Nail Gun to anyone who wants to save time and money!

Sincerely,

**Wayne Andrews**
