Mr. Sandro Di Pede
Marketing Manager
TITANIUM-UDL

Re: TITANIUM-UDL Worthington Homes (Fawn Lake, VA)

Dear Mr. Di Pede,

Nash's General Construction Inc. (Fredericksburg, VA) has been in business for over 20 years. We install everything from roofing to siding, to windows, and we also do complete renovations.

We have started to use your TITANIUM-UDL synthetic roofing underlayment in replacement of 30# and 40# felt paper. On our most recent job for Worthington Homes, your product has been left exposed for over 3 weeks and we have not had a single call back or complaint! We have had some very severe storms come through here recently, and if this were felt paper, we would have been called back to repair the damage several times. TITANIUM-UDL still looks like the day we installed it. This is a tremendous savings to me in time, money and headaches.

Some of the other great benefits of your TITANIUM-UDL are:

1. It lays down super flat and does not wrinkle or buckle like felt paper.
2. We load most of our roofs manually, so the 10 squares per roll is a huge savings in time and labor.
3. The 48" wide and 10 squares per roll allows the product to go down much faster than felt, so this saves us tremendous time and labor during installation.
4. The foot gripping traction of the product is excellent. We felt secure even on the highest pitches of 7:12.
5. We have been using ice and water shield for the entire roof on metal roofing jobs as temporary waterproofing, waiting for metal roof to be installed. We intend to replace the ice & water shield with TITANIUM-UDL. This is a big savings to everyone including the builder, the homeowner, and myself.

We will continue to use TITANIUM-UDL as a replacement for asphalt felt underlayment. You have a great product.

Sincerely,

Tony Bowlings
General Manager
