Seattle, WA

January 6th, 2004

Dear Ms. Thomas,

Throughout my entire working life, I have always been keenly aware of the various construction materials and methods of application available in the marketplace. Before I got into the referral and consulting business, I was a general contractor... so between building houses and now attending over 50 home inspections annually, I think I've learned a thing or two about roofing!

As a contractor, I remember how hard it was to put felt on by myself... how dirty it was and how fragile it could be! I was eager to try an alternative (especially being 60 years old), to 30# felt and when I saw your ad in Professional Roofing Magazine, which caught my eye, I immediately contacted InterWrap, and unlike many businesses today, someone followed up with me very quickly and were extremely helpful!

I applied **TITANIUM-UDL™** on my own roof, and it was a dream come true. It went on easily, we could walk on a 9/12 slope with no fear! There's no plan on doing another roof anytime soon, but surely when I do I will use **TITANIUM-UDL™**. I believe felt will nearly disappear as soon as the roofing industry catches on to how much better, safer and more efficient **TITANIUM-UDL™** is over regular tar paper!

Sincerely,

Jim Stacey
