

## Eave protection using TITANIUM™ synthetic underlayments

August 26th, 2010

TITANIUM™ UDL-25, UDL-30, UDL-50 synthetic roof underlayments are air, water and vapour barriers. They all meet and exceed the test standards for 30lb felt paper with ASTM D226 rating.

Where felt paper is accepted as eave protection, TITANIUM™ UDL synthetic roof underlayments can be used in the same area.

For ice dam protection, we recommend our self adhering peel and stick product, TITANIUM™ PSU-30.

InterWrap Inc.'s TITANIUM™ Warranties will remain in force as currently written.

Any further questions, please direct them to your local TITANIUM™ Regional Manager.
