TITANIUM® UDL synthetic roofing underlayments Pass Class 4 Hail Rating

Vancouver, BC Nov 6th, 2012 – InterWrap's Titanium UDL underlayments have been tested by Intertek Laboratories and have been found to be in accordance with the class 4 requirements of UL2218-12, Impact Resistance of Prepared Roof Covering Materials. This is the highest rating UL offers to demonstrate a roof systems ability to withstand hail damage. This means that building owners can now obtain a class 4 hail rated roof protection by installing TITANIUM underlayment as part of their roofing system. In fact, TITANIUM will continue to shed water and retain its performance characteristics with any shingle Class 4 rated or not.

Please see detailed findings report for each of InterWrap's TITANIUM UDL underlayments at the following links:

TITANIUM UDL25 http://www.interwrap.com/titanium/RPD_PDF/Hail-UDL25.pdf

TITANIUM UDL30 http://www.interwrap.com/titanium/RPD_PDF/Hail-UDL30.pdf

TITANIUM UDL50 http://www.interwrap.com/titanium/RPD_PDF/Hail-UDL50.pdf

The UL2218 test was mandated by insurance companies in order to try and reduce the large claim losses resulting from water intrusion after the destruction of roof covering and underlayment in hail storms. Insurance companies in some parts of the country offer discounts for UL2118 Class 4 hail rated materials. See details on Texas Department of Insurance at <http://www.tdi.texas.gov/home/roofingx.html>

Intertek Testing Service is an independent testing organization with over 127 years of testing and regulatory knowledge and experience operating over 1,000 locations in 100 countries.
